Summary

Information Technology undergraduate at VIT Pune with hands-on experience building and deploying full-stack web applications and AI-powered systems. Currently interning at PharmaACE on healthcare data pipelines and serving as Chairperson of the IT Student's Association.

Education

Vishwakarma Institute of Technology, Pune, India

Sept 2023 – May 2027

● Bachelor of Technology (B.Tech), Information Technology | CGPA: **9.01/10**

(Expected)

Skills

Programming Languages: Python, JavaScript, Java, SQL

Full-Stack Development: ReactJS, FastAPI, HTML5, CSS3

Databases & Tools: MySQL, Firebase

Cloud & DevOps: AWS, Docker, GitHub, Terraform, Jenkins

AI & Agentic Frameworks: LangChain, RAG Architecture, LLM APIs (Groq, Mistral)

Core Competencies: Data Structures and Algorithms (DSA), Object Oriented Programming (OOP), Database Management System (DBMS), Operating System (OS)

Experience & Leadership

PharmaACE Innovations | Analytics Intern

June 2026 – Present

- Building a healthcare provider matching system using NLP, semantic search, fuzzy matching, and machine learning to improve NPI identification accuracy.
- Designing a scheduled ETL pipeline that downloads, processes, and indexes NPPES registry data (~7M+ records), deployed on AWS using EC2, S3, Lambda, and RDS.

Information Technology Student's Association (ITSA) – VIT Pune | Chairperson

July 2025 – Present

- Led a 50+ member team to organize AI tools workshops for first-year students and mock interview & group discussion sessions for second-year students, reaching 1,000+ students across both batches.
- Handled end-to-end planning and execution of all events — from scheduling and speaker coordination to team task assignment and timeline tracking.

Projects

Training & Reporting System – Enterprise Workforce Training Platform ([Project Completion Letter](#) | [GitHub](#))

- Built a cross-platform LMS with separate dashboards for trainers (module creation, scheduling, trainee performance reports) and trainees (learning journey, assessments, progress tracking) — available as a React web app and a React Native mobile app.
- Added server-side PDF and video watermarking using Pillow so training materials are tied to each trainee on download, and secured all API routes with role-based JWT authentication so trainers and trainees only access their own data.
- **Technologies:** Python, FastAPI, MySQL, ReactJS, React Native

Multi-Agent AI Research System ([Live Link](#) | [GitHub](#))

- Built a 4-agent research pipeline where a Search agent queries the web via Tavily, a Reader agent scrapes and cleans the top result using BeautifulSoup, a Writer agent drafts a structured report, and a Critic agent scores it on a rubric.
- Streamed the entire pipeline live to the browser using FastAPI's Server-Sent Events (SSE), so users see each agent's status and output in real time instead of waiting for a final result.
- **Technologies:** Python, LangChain, Mistral AI, FastAPI, React, Tavily API, BeautifulSoup4

MockVue – AI-Powered Mock Interview Platform ([Blog](#) | [Live Link](#) | [GitHub](#))

- Built a video interview practice platform with 330+ questions from 13 companies (Google, Amazon, Microsoft, etc.) where users record answers, get AI scores on content quality, filler words, speaking pace, and eye contact — all tracked on a dashboard.
- Secured the platform with JWT authentication and deployed it with zero infrastructure cost — React frontend on Vercel, FastAPI backend on Render, and a serverless MySQL database on TiDB Cloud.
- **Technologies:** Python, FastAPI, React, TiDB Cloud (MySQL), Groq API (Whisper + Llama 3.3 70B), face-api.js, Vercel, Render

Academic & Extracurricular Achievements

- Winner, INDOvateAI Sprint 2025 – Best Outstanding Project among 200+ teams. ([Certificate](#))
- AWS Cloud Practitioner Essentials – AWS Training & Certification. ([Certificate](#))
- McKinsey.org Forward Program - McKinsey.org. ([Certificate](#) | [Badge](#))
